

THE SANTA MARIA RIVER HEALTHY WATERSHED INITIATIVE

With seed funding from the Rose Foundation, Creek Lands Conservation is working to restore the Santa Maria River Watershed through the following:

- **Developing two projects within existing restoration plans**
 - Retention Basin for Orcutt-Solomon Creek to improve water quality
 - Recharge augmentation on the mainstem Santa Maria to improve water quantity
- **Monitoring water quality with local volunteers**
- **Developing a watershed report card to communicate watershed health to the community**
- **Conducting education and outreach through established community partnerships in the watershed**

We are still seeking \$4,500 for water quality monitoring equipment. Help us restore the Santa Maria River Watershed by supporting our initiative today!
